Miss Branch Wed to Henderson In Court Ceremony Yesterday

By Burner Green

Before an alter decorated with various assortments of the long leaf pine and sneaking ivy, Twig Branch, woman here and Archibald Henderson, former man here, became man and wife in the Y court yesterday.

The groom, who was given away by a son-in-law, was dressed in yellow with red suspenders and a visible veil which fell. His train came on the alter's rail just ten minutes late. The woman wore clothes.

Man out-of-honor, whom the groom chased to the alter was Freddie Weaver, dressed in green. He carried a man's handbook, decked with Twig, and reached the alter shortly before the groom. Others whom the groom paid attention to were Frank Klingberg, George Taylor, and Stuart Sechriest.

The maids in the wedding swept up the aisle and reached the alter in due time. They wore clothes, too. Little Kitty Carmichael acted like a flower girl, while Bill Wells held up the rear with the ring.

Skipper O. J. Coffin married the couple, who left the church. A long reception was held in Kenan stadium where Carl Snavely kicked over the table.

The couple will have a honeymoon in the Arboretum.

Out-of-town guests were the kinda hororable Governor Kerr Scott and a wife with Raleigh; Mrs. Arnold Nash, who left her husband and town to pursue courtship and marriage; and other people.

CAMPUS CALENDAR

12:00—CLASSES BEGIN. University class rooms.
1:00—FREE BEER. YMCA.
1:30—BURLESQUE SHOW. Katherine (Oh-la-la) Carmichael and her Sexy Six will perform. Memorial hall.
2:00—MORE FREE BEER. YMCA.
3:00—COCKTAIL HOUR. Dr. Arnold Nash will speak on "How to Mix a Boilermaker." Gerrard hall.
4:00—STILL MORE Free beer. YMCA.
5:00—BRIDGE TOURNAment. Morehead planetarium.
6:00—THERE'S STILL More free beer.
8:00—MORE FREE beer. All girls' dorms.
9:00—POKER GAME. First Baptist church.
10:00—MORE FREE Beer. All dorms.
11:00—STRIP POKER GAME. Kenan stadium.
12:00—SACK TIME. All dorms.

HANS FRIESTADT, ACTIVE student leader is pictured above as he addressed the organizational meeting of the "J. R. Cherry for president in 52" club, which was held last night. Bill Robertson, another of Cherry's friends is seated beside him. Don Maynard and Joe Cherry, DTH staff members who were instrumental in forming the group are shown in the window. Cherry is a brother of the presidential candidate.

Club Formed Here To Elect Cherry

By English Green

Before a yelling, cheering, and enthusiastic mob that overflowed Graham Memorial last night, Hans Freistadt announced the formation of the J. R. Cherry for President Club. Freistadt and Cherry, long known on the campus for their close friendship, have lately become even more well known through their joint legal column in the DTH called "Write Away."

After Freistadt introduced the quiet and unassuming candidate to the hysterical crowd, he recognized Paul Mullinax, Bob Lindsey, Katherine Carmichael, and Senator L. P. Martin as the people who had done the great job of turning the tide in favor of the new and heavily favored dark horse. Senator Martin, of the late Confederacy and of the present KA chapter, announced to the gathering that Cherry's victory could do more to the United States than the Confederacy could ever hope to do.

Don Maynard, DTH reporter, and Joe Cherry, brother of the presidential aspirant, were elected unanimously to handle public relations of the new Cherry Party. The meeting was then closed to a roar of "heils," "comrades," "amens," and the rending of the furniture.

THE COLONIAL HOUSE SYSTEM

PRODUCING METALLIC TITANIUM FOR INDUSTRIAL EVALUATION

Du Pont group research developed a pilot plant with daily capacity of 100 pounds

Du Pont research has just made available to industry what may become one of America's key structural materials, titanium metal. Midway in density between aluminum and iron and with an especially high melting point, silvery-white titanium offers an extraordinary combination of strength, lightness, corrosion resistance and hardness.

Titanium is the ninth most common element. But it has been slow in coming into its own as a metal because of the difficulty of separating it in pure form from its ores.

Men pictured *on this page were members of titanium research team. E. L. Anderson, A.B.Ch., Brigham Young '40; J. B. Sutton, Ph.D.Phys.Ch., West Virginia '35; A. R. Conklin, M.S.Phys.Ch., Georgia '40, are shown inspecting 300 lbs. of Du Pont titanium metal sponge.*

Du Pont scientists first began to probe the possibilities of metallic titanium in the course of their long experience with the titanium oxide pigments. Their research was interrupted by World War II. Meanwhile, the U.S. Bureau of Mines laboratories succeeded in producing the metal for research purposes.

After the war, Du Pont scientists developed a process for the production of ductile titanium metal that can be scaled up to meet commercial demands. The research team that mastered the complex problem consisted of chemical engineers specializing in design and production, as well as chemists and a metallurgist. In September 1948, a pilot plant was opened with a daily capacity of 100 pounds. Titanium metal is now being produced in sponge and ingot form. Samples are available to industrial and college laboratories with research projects in related fields. Studies of methods for forming, machining and alloying are under way.

Exhaustive studies will be necessary before the many possibilities of titanium metal can be known. Because of its high ratio of strength to weight, early uses may be in airplane power plants and structural parts. Its hardness and rust-resistance recommend it for railroad transportation equipment, marine power plants and propellers, and food packaging equipment. Its high melting point suggests use in pistons, and its resistance to electric currents points to electronics. Titanium wire may be used for springs and titanium sheet for such highly stressed parts as microphone diaphragms.

Your Opportunity in Research

The commercial development of titanium metal is a typical example of Du Pont research in action. However, the Pigments Department, which worked out the process, is but one of the ten Du Pont manufacturing departments. Each conducts continuous research. Each is operated much like a separate company. Within these "companies"—whose interests range from heavy chemicals to plastics and textile fibers—college trained men and women work in congenial groups where they have every opportunity to display individual talent and capabilities. Who knows what their contributions will mean in the future to science and the world!

C. M. Olson, *Ph.D.Phys.Ch., Chicago '36, and C. H. Winter, Jr., B.S.Ch.E., Virginia Polytechnic Institute '40, removing 100-lb. titanium ingot from furnace in heat-treating study.*

R. C. Reidinger, *B.S.Ch.E., Princeton '47, and T. D. McKinley, B.S.Ch., Worcester Polytechnic Institute '35, making a test of the hardness of ingots of Du Pont titanium metal.*

THIS BOOKLET WILL HELP YOU PLAN YOUR CAREER

Send for your personal copy of "The Du Pont Company and the College Graduate." Describes opportunities for men and women with many types of training. Explains how individual ability is recognized and rewarded under the group system of operation. Address: 2518 Nemours Building, Wilmington, Delaware.
